

Gateway Safety's Serpent™ Ventilated Safety Helmet Provides Cool Comfort in Hot Weather

May 2011—For workers who dread wearing uncomfortable, hot safety helmets on the jobsite, extra comfort features can make the difference. Gateway Safety's Serpent™ Ventilated Safety Helmet offers all-day comfort, light weight, and excellent ventilation combined with optimal head injury protection. Serpent's sleek snakehead shell style also keeps workers looking good while staying safe.

Serpent is ultra light and comfortable at just 13.1 ounces, with a six-point nylon suspension system. A rotating ratchet adjustment easily fits over the nape of the neck for a comfortable, secure fit. And because heat buildup under the helmet can cause fatigue and heat stress, ventilated Serpent is the ideal choice. Its CoolSense™ airflow system, along with six vents along the peak of the helmet, promotes heat release and keeps workers cool. Additional features include a cushioned brow pad, which absorbs moisture and perspiration and a rain trough to divert water from workers' faces.

The Serpent shell is made of a sturdy high-density polyethylene material that provides exceptional impact protection without adding weight. Gateway Safety's Serpent complies with the ANSI Z89.1 Standard for Type I, Class C helmets.

About Gateway Safety, Inc.

For more than 65 years, Gateway Safety has been designing and manufacturing award-winning, cost-effective safety products in eye, face, head, hearing and respiratory protection. Gateway Safety works hard to provide personal protective equipment that workers want to wear—helping companies increase safety compliance, improve the overall welfare of their employees, and reduce the high costs associated with workplace injuries. With many products independently certified to meet [ANSI](#) and [CSA](#) standards, Gateway Safety ensures its products are safe, durable and of the highest quality.
